

Universal pressure-sensitive and wet adhesive

Uzin KE 2000 S New: Fast and versatile

Ulm, August 2011 – The dispersion-based adhesive Uzin KE 2000 S is a classic product which has been on the market for more than 20 years. Its easy processing and sure and reliable application are persuasive qualities. An updated formula with new raw materials technology now offers a reduced open time and a wider range of use. Uzin KE 2000 S New, with its very low emissions, has both the Blue Angel and Emission EC 1 Plus labels.

Uzin KE 2000 S New

After 20 years, even proven products need some general upgrading. To provide users with optimum support in their day to day work, the Uzin Development Department has updated the formula for the proven Uzin KE 2000 S on the basis of the latest raw materials. The result is: Uzin KE 2000 S New has a shorter open time, which can mean a time saving of up to 20 minutes when for instance installing PVC floor coverings on dense substrates. As the working time does not decrease, the universal pressure-sensitive and wet adhesive gives the installer greater scope, as the floor covering can be laid onto the adhesive bed considerably sooner. In addition, this means the adhesive is better pressed down and the overall look is improved: the floor covering appears flatter and smoother.

Versatile and environmentally friendly

Uzin KE 2000 S New has a versatile range of application. It is the specialist adhesive for installing PVC, CV and rubber floor coverings and is also suited to textile floor coverings, light needle punch floor coverings or woven carpets, luxury PVC floor coverings and linoleum. It can be processed in the pressure adhesion bed, solution bed and double-drop bonding methods and is easy to spread. In
